Abstract:

IG is a world-leading online trading and investment provider. Everyday traders and investors use our platform to access opportunities in financial markets. To make better use of our data lake we've built a client knowledge graph and explored different applications of this knowledge graph. During this talk I will discuss:

- **Graph database**
- **Graph modelling**
- **Graph-based recommendation system**
- **Probabilistic graphical model representations on knowledge graph**
- **The lessons we learnt**
