**报告人: Prof. Anatoly Yagola**

**(Department of Mathematics, Physical  
Faculty, Moscow State University )**

**报告题目:**

**Error Estimation for Ill-posed  
Problems with a Priori Information**

**邀请人: 袁亚湘研究员**

**报告时间: 2009年7月21日(周二)**

**下午 3:30—5:00**

**报告地点: 科技综合楼三层 311**

**计算数学所报告厅**

## **Abstract:**

**The theory of solving linear and nonlinear ill-posed problems is advanced greatly today (see, e.g., [1, 2]). A general scheme for constructing regularizing algorithms using Tikhonov's variational approach is considered in [2].**

**It is very well known that ill-posed problems have unpleasant properties even in the cases when stable methods (regularizing algorithms) of their solution exist. E.g., it is impossible to estimate an error of an approximate solution of an ill-posed problem without very strong assumptions concerning the unknown solution. The following assumptions are under consideration: 1) the unknown solution is an element of the given compact set; 2) the unknown solution is sourcewise represented with a compact operator. For these cases the theory of error estimation or a posteriori error**

**estimation was developed and applied for solving operator equations including integral equations and some inverse problems for differential equations. Numerical methods for solving ill-posed problems and their error estimation are based on convex programming.**

**The results above were used for the solution of the practical problems in acoustics, nuclear physics and electron microscopy.**
