报告题目:

Recent advances in isotropic surface remeshing

邀请人: 卢本卓研究员

报告时间: 2017 年 12 月 18 日(周一)

上午 10:00--11:00

报告地点: 数学院南楼 702 教室

报告摘要:

Isotropic remeshing is widely used in computer graphics and related applications, such as deformation, simulation, 3d

printing and so on. In this talk, I will first introduce the basic concept of isotropic remeshing, and then briefly go through my recent work on this topic, including global optimization based approaches, blue-noise sampling based remeshing, and remeshing methods with discrete local operation.
